DC PLUG will provide resiliency against major storms and improve the reliability of the electric system

Multi-year program to underground up to 20 of the most vulnerable overhead distribution lines, spanning over 6-8 years with work beginning in early 2019

Feeder Selection Process

In selecting the feeders, DDOT and Pepco followed a five-step process:

Based on data from January 1, 2010 through December 31, 2016 for first biennial and January 1, 2010 through December 31, 2018 for second biennial, ranked feeders by historical reliability and customer minutes of interruptions reduced per dollar spent (SAIFI, SAIDI, CMI/\$).

Identified the highest-ranked feeders in each of the five Wards (Wards 3, 4, 5, 7 and 8) of the District of Columbia characterized by a large concentration of overhead power lines and susceptibility to overhead outages.

Analyzed ongoing reliability work as well as current and planned system work.

Identified opportunities to take advantage of existing or planned DDOT roadway reconstruction projects.

Finalized the feeder selection for inclusion in the Biennial Plans.
